About Us

At Prince Traders, all our activities revolve around Swimming Pools. No matter the size or shape, residential or commercial, temporary or permanent, indoor or outdoor, a hotel or a club, a sports complex or a water park, we have the capacity to provide you with the optimum solution.

The company was established in 1992, and has ensured its position as a reference point in the Swimming Pool Industry in India since inception. The company stands apart of the crowd as it define itself as a service provider and not just a swimming pool constructor or a chemical vendor. We undertake all services related with Swimming Pools Under One Roof.

What is a Swimming Pool?

A Swimming pool is an open water system, which is constantly influenced by the environment as well as by the swimmers using the pool.

Rain, wind and sunshine, all have an influence on the purity and clarity of water; so do the swimmers, introducing foreign particles such as sweat, lotions and oils into the swimming pool water.

For a clean and healthy swimming pool, some form of sanitisation of the pool water is required on a regular basis.

The balance and quantity of chemicals we put into the pool is therefore, extremely important from health point of view - on one hand we have bacteria, viruses and fungus which can potentially cause illness, and on the other hand, the swimming pool chemicals that we add can cause physical harm. Unfortunately we can only see the relatively harmless black algae and green algae present in the pool water, but very harmful bacteria, viruses and fungi remains invisible to the naked eye.

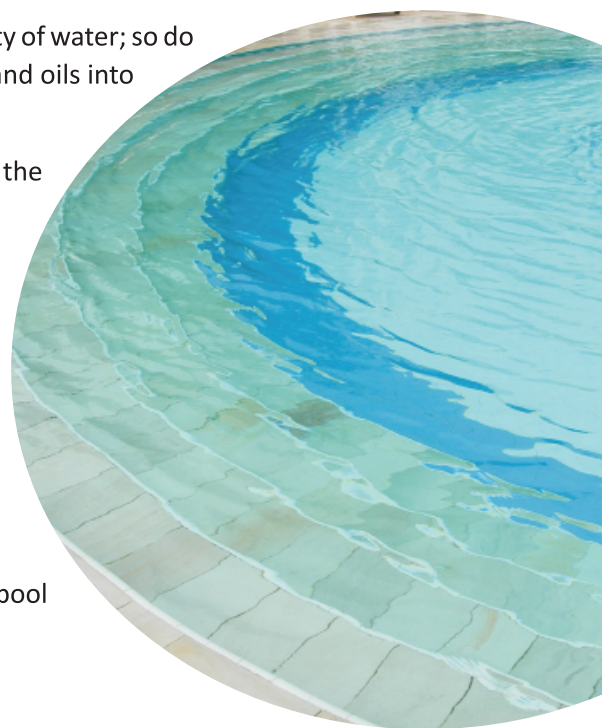

With us, you can be assured of healthy and enjoyable times at the pool and poolside.

What is Swimming Pool Maintenance?

In ensuring a clean, clear swimming pool, our efforts are concentrated in two major areas: maintaining or adjusting the chemical balance of the pool water, and removing the unwanted dirt and foreign particles from the swimming pool.

Balancing the chemicals in the swimming pool water cannot be maintained by adding pool chemicals as and when we feel like. We need to regularly test the pool water and adjust the levels accordingly (waterXperts).

In order to remove unwanted substances from swimming pool, we rely on adequate circulation of water and proper filtration system; regular brushing of underwater surface, high-pressure vacuuming of swimming pool and cleaning the surface of water. We also need to clean the filter and replace the filtration medium if necessary. And, these tasks require high-level technical skills in pool operation and precision in chemical dosing.

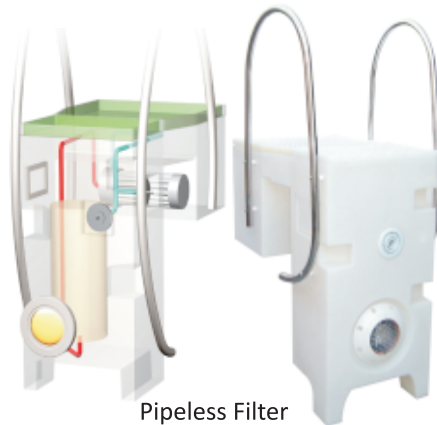

Top Mounted Sand Filter

Side Mounted Sand Filter

Pipeless Filter

Centrifugal Pump

Multiport Valve

Vaccum Trolley

Moving Filtration Unit

Overflow Drain Grating

Stainless Steel Ladder

Above Ground Portable Pool

Under Water Lights

Telescopic Handle

Vaccum Head

Suction Head
